

**Wireless Remote Control System for Air Balancing Damper Adjustments**

**Installing the ceiling panel board around the Ceiling Receptacle**

Making sure the hole in the panel board for the Ceiling Receptacle “finger” is in the right place is only a matter of taking two measurements.

From the end of the panel, measure over to the center of the CR bracket. Then from the side of the ceiling panel, measure over TWO inches. Where these two lines intersect, will be the center for a 1-1/2" round cut out.

If the panel board is accurately positioned on the T grid, the hole will be in the correct position.,

Even a well-designed HVAC system may perform poorly and waste energy if not properly balanced. The **Zipset System's** unique approach to the air balancing task insures a quick, precise and economical solution.

**The Zipset System is a product of The Zip Group, LLC**
